DEPARTMENT OF RADIOLOGY

Patient Name:	**Vikram Malhotra**	**Order / Barcode:**	#2 • BAR-892110
Patient ID (MRN):	MRN-2026-0102	**Investigation:**	**Chest X-Ray (PA View)**
Age / Gender:	52 Y / MALE	**Sample / Modality:**	Radiology Image (XRAY)
Referring Clinician:	Dr. Dr. Rajesh Sharma	**Report Date/Time:**	21-Oct-2026 20:52

MODALITY: XRAY — Chest X-Ray (PA View)

CLINICAL INDICATION / HISTORY:

Persistent cough for 2 weeks, low-grade pyrexia. Rule out consolidation or Kochs.

TECHNIQUE / PROTOCOL:

Single upright inspiratory posteroanterior (PA) projection of the chest.

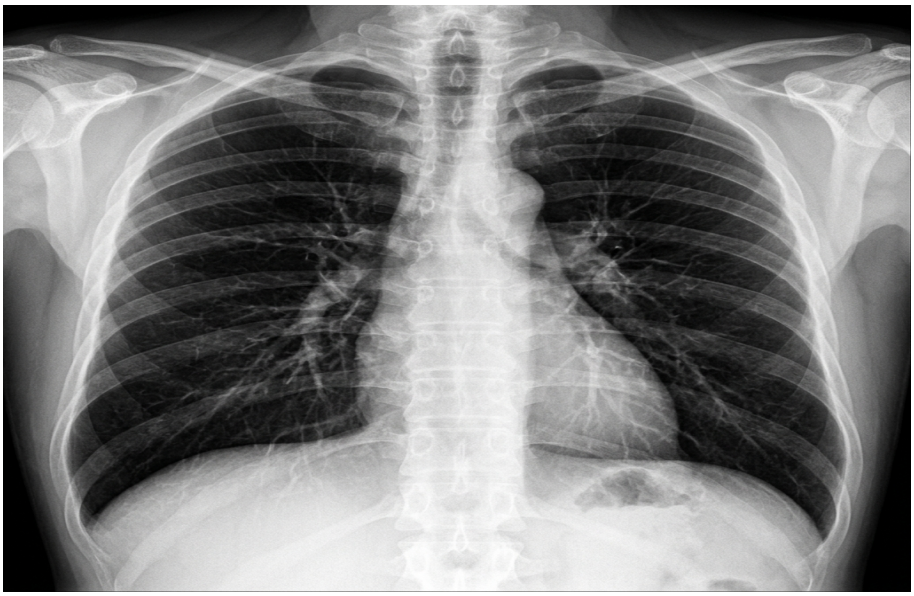

Fig: Diagnostic Scan Acquisition

OBSERVATIONS & FINDINGS:

Both lung fields are well expanded and clear. No focal parenchymal consolidation, cavitation, or pleural effusion is identified.
Cardiothoracic ratio is normal (< 0.50).
Mediastinum and hilar contours are unremarkable.
Visualized thoracic skeleton and chest wall soft tissues are within normal limits.

IMPRESSION & DIAGNOSIS:

- **Normal chest radiograph (PA View). No evidence of active pulmonary consolidation or tuberculosis.**
